[a]We were unable to determine injury severity score for 566 (18.0%) hospitalizations.
[b]We calculated P values using the chi-square statistic.
[c]Missing data values were excluded for all statistical analysis.
[d]We were unable to determine patient gender for two (0.1%) hospitalizations.
[e]We were unable to determine patient race/ethnicity for 46 (1.5%) hospitalizations.
[f]We were unable to determine patient insurance status for 63 (2.0%) hospitalizations.
