

Medication Reconciliation

Objective – The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation.

Measure – The EP performs Medication Reconciliation for **more than 50% of transitions of care** in which the patient is transitioned into the care of the EP.

‘How To’ in PrimeSUITE 2011 – For visits where the EP is the recipient of a transition of care, check the new **Transition of Care** checkbox from the Medication List or History and Habits Wizard. If the EP also performs manual medication reconciliation, check the new **Medication Have Been Reconciled** checkbox as well to meet the objective.
