Menu Objective 1

Drug-formulary checks - 170.302(b)

The EP has enabled this functionality and has access to at least one internal or external drug formulary for the entire EHR reporting period.

eClinicalWorks is a Surescripts Solution provider. Using this functionality, a patient-specific drug formulary check can be performed in real-time at the point-of-prescribing. The formulary check will alert the provider and the patient if the prescribed drug is not covered by the patient’s insurance plan and will suggest lower-cost therapeutic alternatives.
