Menu Objective 2

Document clinical lab test results as structured data - 170.302(h)

More than 40% of all clinical lab test results ordered by the EP during the EHR reporting period whose results are either in a positive/negative or numerical format are incorporated in certified EHR technology as structured data.

eCW has both uni-directional and bi-directional interfaces in place with thousands of in-house labs, hospital labs, and national reference labs across the country. Using these HL7 interfaces, providers can transmit orders securely and accurately and receive results into the EMR as discrete data, providing timely results and a streamlined workflow.
