Texas Senate Finance Committee
Senate Bill 248 by Sen. Nathan Johnson
Testimony by Lindy McGee, MD

On behalf of:
Texas Pediatric Society
Texas Medical Association
Texas Public Health Coalition

March 30, 2021

Chair Nelson, Vice Chair Lucio, and committee members,

My name is Dr. Lindy McGee, and I am a practicing pediatrician in Houston. Thank you for the opportunity to testify on behalf of the Texas Pediatric Society, Texas Medical Association, and Texas Public Health Coalition. We strongly support Senate Bill 248.

Texas physicians are concerned about the high rates of e-cigarette use among youth and the associated current and future health risks. In 2019, 27.5% of U.S. high school students and 10.5% of middle school students reported current use of e-cigarettes.¹ In Texas, that would mean more than 1.2 million young people were using e-cigarettes and vaping products. According to the Texas Department of State Health Services, nearly 40% of teens have vaped at least once.² E-cigarettes are the most commonly used tobacco product among teens, and have been since 2015.³

Vaping exposes adolescents to a variety of health risks both in the present and in the future. First, the nicotine in these devices is not benign. While at low doses nicotine acts as a stimulant that can produce pleasurable symptoms, sizable amounts of nicotine can be dangerous for the nicotine naïve, such as children. Furthermore, nicotine is a psychoactive drug that is easy to become addicted to, requiring additional levels of nicotine as one’s body becomes more tolerant. Research has shown that adolescent brains are uniquely susceptible to nicotine addiction,⁴ and

TATAMS follows a large, population-based cohort (n=3,907; N=491,096) of middle school and high school students in Houston, Dallas-Ft. Worth, San Antonio, and Austin.
nicotine exposure modifies developing brains with long-term effects into adulthood.\(^5\) Vaping also puts adolescents at risk for e-cigarette or vaping product use-associated lung injury (EVALI).

Teens who vape are more likely to progress to cigarette smoking than their peers who do not – putting them at increased risk for a variety of tobacco-related deaths. We, as a state, are aware of the harmful effects of tobacco. Texas has made major progress in addressing tobacco-related deaths. However, with the increase in e-cigarette use and the progression from vaping to smoking, it is estimated that as many as 498,000 Texas teens will die prematurely from smoking if it is not curbed.\(^6\) We cannot move backward in addressing tobacco related-injury and -mortality.

An additional concern is the considerable risk that smoking and tobacco use become normalized once again. Since the recognition of the harmful effects of smoking and significant intervention efforts to educate youth, smoking has become an unpopular behavior among most young people. However, because e-cigarettes are not subject to the same advertising and other restrictions as tobacco, the behavior is becoming more acceptable. This is especially problematic for children who often cannot perceive the difference between electronic or traditional cigarettes.

We strongly support the provisions in Senate Bill 248 that require retailers to obtain permits and strengthen enforcement. Requiring permits for retailers and employing penalties for underage sales to regulate cigarette and tobacco products have been successful tools in decreasing the smoking rate among adolescents. As e-cigarettes are both dangerous in their own right and a gateway to other tobacco products, the regulation and enforcement mechanisms for e-cigarettes should be the same as those for tobacco products. This bill takes important steps to recognize the serious health risks of vaping and to limit youth access to e-cigarettes.

Thank you for the opportunity to provide comments on Senate Bill 248. For any questions or follow-up, please contact Clayton Travis, director of advocacy and health policy, Texas Pediatric Society, at Clayton.Travis@txpeds.org.
