

The State of EHRs – Texas 2016

Most Texas physicians use an electronic health record, but problems persist.

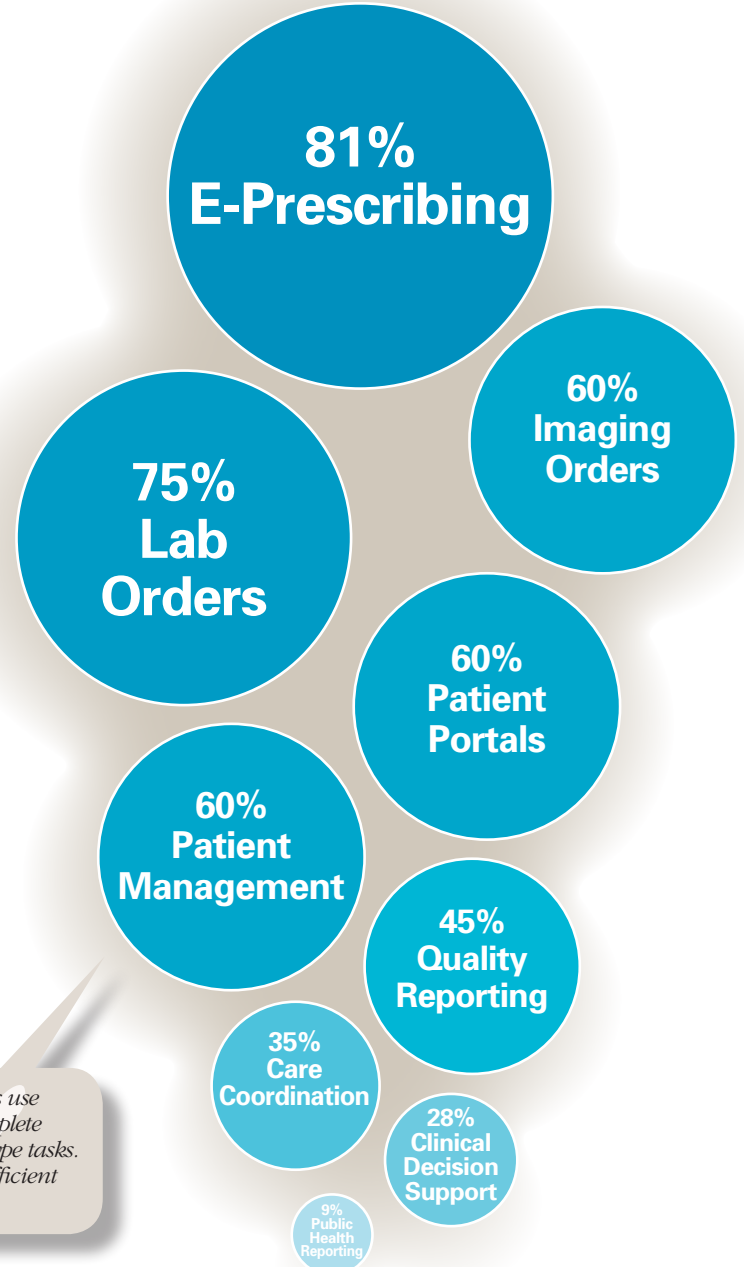

EHR Rate of **ADOPTION**

Our Take

While a steady 20% of physicians never plan to use an EHR, those who plan on implementing one are readily becoming users.

How They're **USING IT**

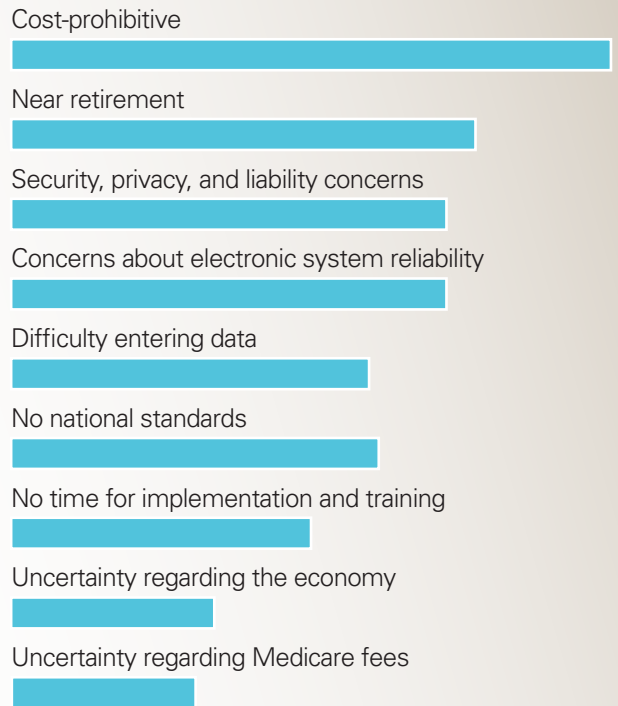

Our Take

Mostly physicians use their EHR to complete administrative-type tasks. Is this the most efficient use of this tool?

Our Take

As physicians retire out of the health care system, will the share of EHR users eventually approach 100%?

Why They're **HOLDING BACK**

*Experienced
Improved Patient Safety
or Care Quality*

50%

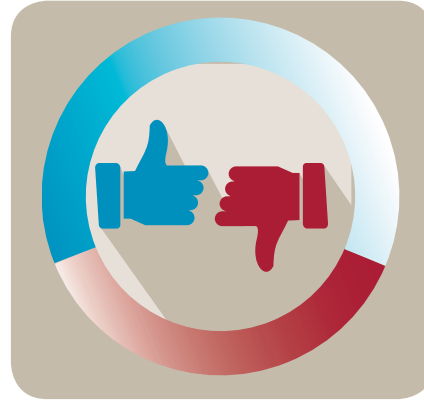

Easily Accessible
& Legible

Better Drug Interaction
& Medication Management

Better Patient
Management & Coordination

Other

*Nearly 2/3 of users
are **SATISFIED***

*What they **DON'T LIKE**
Regarding disruption of care*

Use of EHR **decreases attentiveness** to patient's presentation of signs and symptoms.

Disagree Agree

Data entry at point of care **disrupts** physician's diagnostic **thought process**.

Disagree Agree

Data entry process **disrupts** formation of differential **diagnosis**.

Disagree Agree

Using an EHR **creates data retrieval problems** in reviewing patient's history.

Disagree Agree

Delays/Errors in Care

Distracts From/
Interferes in Care

Inaccurate/Too Much Data

Other

34%

*Experienced
Harm to
Patient Safety or
Care Quality*
